

VCDS (VAG-COM Diagnostic System) Compatibility Charts

The following VCDS Compatibility Charts are based on Model and Chassis Type. To find the Chassis Type for your car, look at the 7th and 8th digits of the VIN number. The Chassis type will usually be found in these digits. There are exceptions. If you cannot identify the Chassis type, please contact Ross-Tech.

Consider an example for an Audi A6.

The VIN number for this particular car is: WAUZZZ4F36N111022. Note that the 7th and 8th digits are 4F.

View the Model information column for Audi to find the A6 model. Note that the Chassis number "4F" is listed under that model.

Look horizontally across the VCDS Compatibility Chart until you find the year that the "4F" Chassis began production and you can determine which interface(s) is required for that Chassis.

In this particular case you will see that only the HEX+CAN series interface is compatible.

Please Note: Older VCDS versions may not support all of the model years listed. These charts are intended for the most current version of VCDS.
